

GEAS - oks na

1. A wildlife reserve removes its top predators; however, the deer population does not increase over time. Which ecological principle BEST explains this observation?
A. Competitive exclusion principle
B. Insufficient food supply and habitat support
C. Predator-prey oscillation cycle
D. Genetic drift
2. A sealed balloon is gradually heated while the external atmospheric pressure remains constant. Which of the following will MOST likely occur?
A. The balloon contracts due to increased internal pressure
B. The balloon expands outward
C. The balloon mass increases
D. The temperature remains constant
3. A manufacturing company temporarily stops production due to low demand but continues paying its salaried engineers. From a cost accounting perspective, these payments are classified as:
A. Variable cost
B. Marginal cost
C. Fixed operating cost
D. Sunk cost
4. A vibration travels along a stretched string while each segment of the string moves only vertically. What does this indicate about the nature of the wave?
A. It is a longitudinal wave
B. It is a transverse wave
C. It is a compressional wave
D. It is a standing wave
5. Halfway through a project, the actual expenses exceed the planned budget allocation. What is the MOST logical next step for the project manager?
A. Immediately terminate the project
B. Request additional funding without analysis
C. Analyze cost variance and adjust project plans
D. Replace the entire project team
6. During silicon wafer fabrication, unintended impurities result in inconsistent electrical characteristics. Which stage of the process is MOST critical in preventing this issue?
A. Wafer slicing
B. Doping and diffusion process
C. Packaging
D. Wire bonding
7. Two identical conductors move through the same magnetic field, but one is moved at a higher velocity. How will the induced current compare?
A. Both conductors will produce equal induced current
B. The slower conductor will produce more current
C. The faster conductor will produce more induced current
D. No induced current will be generated

8. A small structural imperfection repeats throughout a crystal lattice. What is the MOST likely consequence of this defect?
- A. Perfect crystalline behavior
 - B. Increased transparency
 - C. Altered mechanical and electrical properties**
 - D. Complete structural collapse
9. An engineer is instructed to approve work completed by an unlicensed individual without proper review. Which ethical principle should guide the engineer's decision?
- A. Loyalty to employer
 - B. Obedience to authority
 - C. Professional accountability**
 - D. Cost minimization
10. A startup delays rapid expansion despite experiencing high market demand. What is the MOST reasonable justification for this decision?
- A. Avoiding additional profit
 - B. Managing cash flow and operational risks**
 - C. Reducing market share
 - D. Eliminating workforce growth
11. In a competitive service industry, which operational decision would MOST improve customer experience?
- A. Increasing service price
 - B. Reducing variation in service delivery duration**
 - C. Limiting employee training
 - D. Minimizing customer interaction
12. Which function in C++ using the Windows API is used to create a window?
- A. InitWindow()
 - B. BuildWindow()
 - C. CreateWindow()**
 - D. StartWindow()
13. Under Republic Act No. 10601 (Agricultural and Fisheries Mechanization Act), which section promotes technological innovation and automated practices in agriculture and fisheries?
- A. Section 5 – Credit Assistance
 - B. Section 12 – Training and Extension
 - C. Section 21 – Integration of Electronics in Agriculture and Fisheries**
 - D. Section 30 – Import Regulation
14. Which object-oriented programming principle allows methods with the same name in different classes to exhibit different behaviors?
- A. Encapsulation
 - B. Abstraction
 - C. Inheritance
 - D. Polymorphism**
15. An organization emphasizes formal authority, strict rules, and written procedures. What is the PRIMARY benefit of this approach?
- A. Increased creativity
 - B. Faster informal communication

C. Greater predictability in operations

D. Reduced documentation

16. What is a bond?

A. A certificate of stock ownership

B. A written acknowledgement of debt

C. A short-term bank loan

D. A government tax receipt

17. A technopreneur prioritizes conducting customer interviews before starting product development. What is the MOST significant benefit of this approach?

A. Reduced production cost

B. Faster manufacturing process

C. Improved alignment between product and user needs

D. Increased technical complexity

18. A circuit breaker trips repeatedly even when only minimal devices are connected. After eliminating overload as the cause, what should be examined next?

A. Appliance brand compatibility

B. Utility company supply voltage

C. Internal wiring integrity and possible insulation faults

D. Power outlet color coding

19. A manager completes tasks using minimal resources but consistently fails to meet organizational targets. This manager is best described as:

A. Effective and efficient

B. Inefficient but effective

C. Efficient but ineffective

D. Neither efficient nor effective

20. In CAD practice, why are reference images commonly placed on a dedicated layer?

A. To permanently merge them with final drawings

B. To increase rendering speed

C. To allow selective visibility during drawing work

D. To prevent scaling adjustments

21. Two identical waves travel through different materials. One wave moves faster than the other. What primarily determines this difference in speed?

A. Wave amplitude

B. Wave frequency

C. Physical characteristics of the medium

D. Observer position

22. What is the SI unit of electrical current?

A. Volt

B. Ohm

C. Ampere

D. Watt

23. When evaluating a large-scale battery project for sustainability, which factor is MOST critical?

A. Initial installation cost

B. Color and size of batteries

C. End-of-life handling and recycling impact

D. Brand popularity

24. During a SWOT analysis, which of the following is MOST likely classified as an external factor?
- A. Employee skill level
 - B. Company financial reserves
 - C. Changes in environmental compliance laws**
 - D. Internal production capacity
25. Which keyword is used in both C++ and Java to handle exceptions?
- A. Try
 - B. Catch**
 - C. Throw
 - D. Finally
26. A steel rod returns to its original length after being stretched within its elastic limit. Which material property is demonstrated?
- A. Plasticity
 - B. Ductility
 - C. Elasticity**
 - D. Brittleness
27. Assigning tasks, defining responsibilities, and coordinating resources are functions of which management activity?
- A. Planning
 - B. Organizing**
 - C. Leading
 - D. Controlling
28. Which requirement of the National Building Code most directly ensures public safety during earthquakes?
- A. Use of decorative materials
 - B. Adherence to structural and seismic design standards**
 - C. Interior layout specifications
 - D. Electrical outlet spacing rules
29. In practical engineering systems, energy conversion MOST realistically refers to:
- A. Creating energy from nothing
 - B. Maximizing useful output from available energy**
 - C. Eliminating all energy losses
 - D. Converting all input energy into heat
30. What battery type is commonly used in Uninterruptible Power Supply (UPS) systems?
- A. Lithium polymer battery
 - B. Nickel-cadmium battery
 - C. Lead-acid battery**
 - D. Alkaline battery
31. Which process most directly increases the acidity of ocean water over time?
- A. Evaporation of seawater
 - B. Absorption of atmospheric carbon dioxide by seawater**
 - C. Increased sunlight exposure
 - D. Salt crystallization

32. In strategic marketing, which decision has the greatest impact on long-term competitive positioning?
- A. Packaging design
 - B. Advertising color scheme
 - C. Determining target market segments**
 - D. Office location
33. The Theory X and Theory Y models were proposed by which management theorist?
- A. Frederick Taylor
 - B. Elton Mayo
 - C. Douglas McGregor**
 - D. Peter Drucker
34. If current remains constant in a circuit and resistance increases, what happens to the voltage according to Ohm's Law?
- A. Voltage decreases
 - B. Voltage remains constant
 - C. Voltage increases proportionally**
 - D. Voltage becomes zero
35. The properties of ceramics are most closely linked to their dominant bonding type, resulting in:
- A. High electrical conductivity
 - B. Resistance to high temperature**
 - C. High ductility
 - D. Low brittleness
36. A 10-ohm resistor is connected to a 12 V battery. What is the current flowing through the resistor?
- A. 0.83 A
 - B. 1.00 A
 - C. 1.20 A**
 - D. 12.0 A
37. In electronic device fabrication, which advantage of nanomaterials most improves device performance?
- A. Increased material weight
 - B. Reduced conductivity
 - C. Enhanced performance at reduced device size**
 - D. Higher power consumption
38. Which topic is MOST likely analyzed under macroeconomics?
- A. Pricing strategy of a single firm
 - B. Consumer buying behavior
 - C. National unemployment trends**
 - D. Individual household budgeting
39. In which situation does particle motion occur parallel to wave propagation?
- A. Surface water waves
 - B. Light waves in vacuum
 - C. Compression waves moving through air**
 - D. Vibrations on a string
40. Under Republic Act No. 9292, what is the primary reason the unlicensed practice of electronics engineers is prohibited?
- A. To increase government revenue

- B. To limit industry competition
 - C. To ensure public safety and professional accountability**
 - D. To reduce employment opportunities
41. A silicon sample is doped with phosphorus atoms. Which type of charge carrier becomes dominant in electrical conduction?
- A. Holes in the valence band
 - B. Free electrons in the conduction band**
 - C. Bound electrons in covalent bonds
 - D. Positive ions in the lattice
42. During beta decay, which particle is emitted from the nucleus?
- A. Alpha particle
 - B. Neutron
 - C. Electron or positron**
 - D. Gamma photon
43. A venture capitalist compares two startups. One demonstrates rapid early growth but uncertain product-market fit, while the other shows slower growth with validated customer demand. Which factor MOST strongly supports a funding decision?
- A. High short-term revenue
 - B. Large marketing budget
 - C. Evidence of scalable market demand**
 - D. Founder's technical background
44. What type of bond primarily holds carbon atoms together within the layers of graphite?
- A. Ionic bond
 - B. Metallic bond
 - C. Hydrogen bond
 - D. Covalent bond**
45. In a series circuit containing multiple resistors, how is electrical energy distributed as current flows?
- A. Stored in the resistors permanently
 - B. Converted into heat across resistive elements**
 - C. Converted into magnetic energy
 - D. Remains unchanged
46. Neutral paper fragments are attracted to a charged comb. This phenomenon is primarily due to:
- A. Coulomb repulsion
 - B. Magnetic interaction
 - C. Charge induction within the paper**
 - D. Conduction of electrons
47. Which condition is ESSENTIAL for sustaining nuclear fusion reactions in the Sun's core?
- A. Low pressure and moderate temperature
 - B. Extremely high temperature and pressure**
 - C. Presence of heavy elements
 - D. Strong magnetic shielding
48. When white light passes through a prism and separates into colors, which property of light causes this effect?
- A. Wavelength-dependent refractive index of the medium
 - B. Interference of overlapping light waves

C. Variation of light speed with wavelength inside the medium

D. Partial internal reflection within the prism

49. Prolonged coral bleaching MOST directly affects which aspect of marine ecosystems?
- A. Ocean salinity levels
 - B. Marine food web stability**
 - C. Tidal patterns
 - D. Sediment composition
50. Elton Mayo's research highlighted the influence of social factors on productivity. What major conclusion emerged from his findings?
- A. Financial incentives are the only motivator
 - B. Worker behavior is shaped by social interaction**
 - C. Strict supervision increases efficiency
 - D. Productivity depends solely on physical conditions
51. Which section of the Philippine Electrical Code governs installations in hazardous locations with flammable substances?
- A. General requirements for branch circuits and feeders
 - B. Grounding and bonding for service equipment
 - C. Regulations for equipment used in hazardous environments**
 - D. Standard wiring methods for dwelling units
52. In rigid body rotation, which quantity remains the same for all particles of the body?
- A. Linear velocity
 - B. Tangential acceleration
 - C. Distance from the axis of rotation
 - D. Angular velocity**
53. At resonance in a series AC circuit, which condition causes the circuit to draw maximum current?
- A. Inductive reactance exceeds capacitive reactance
 - B. Capacitive reactance exceeds inductive reactance
 - C. Net reactance becomes zero**
 - D. Resistance becomes zero
54. Under the Electronics Engineering Law (RA 9292), who may legally supervise electronics engineering work performed by non-licensed individuals?
- A. Any senior technician
 - B. Licensed ECE with valid registration**
 - C. Company manager
 - D. Engineering graduate without license
55. In an electrochemical reaction, the anode is identified by which fundamental process?
- A. Gain of electrons
 - B. Reduction reaction
 - C. Loss of electrons**
 - D. Neutralization
56. Which factor MOST strongly limits the ability of low-income countries to pursue long-term sustainable development?
- A. High export volume
 - B. Abundant natural resources
 - C. Persistent poverty affecting education and health**

D. Strong foreign investment

57. An investment consists of equal annual deposits made at the end of each year. This cash flow pattern represents:

- A. Perpetuity
- B. Present worth of annuity due
- C. Future worth of an ordinary annuity**
- D. Gradient series

58. An engineer authors original instructional material for commercial publication. Which form of protection BEST safeguards the expression of the work?

- A. Patent
- B. Trademark
- C. Trade secret
- D. Copyright**

59. Which programming paradigm emphasizes immutability and avoids changing program state?

- A. Procedural programming
- B. Object-oriented programming
- C. Functional programming**
- D. Event-driven programming

60. In object-oriented analysis, identifying real-world objects, their attributes, and interactions corresponds to which system aspect?

- A. Interface design
- B. Database optimization
- C. Problem domain modeling**
- D. Code refactoring

61. The Professional Regulation Commission (PRC) ensures continued competence among ECE professionals primarily through:

- A. Periodic evaluation of compensation standards across the industry
- B. Monitoring compliance with license renewal requirements**
- C. Direct supervision of engineering projects nationwide
- D. Accreditation of private companies employing licensed professionals

62. Which atmospheric process allows greenhouse gases to contribute to global warming?

- A. Reflection of visible light
- B. Absorption and re-emission of infrared radiation**
- C. Ozone layer depletion
- D. Air convection currents

63. A heat pump delivers 500 J of heat while consuming 150 J of electrical work. What is its coefficient of performance (COP)?

- A. 2.50
- B. 3.00
- C. 3.33**
- D. 4.00

64. Which stage of the water cycle contributes most to regulating atmospheric humidity over forested regions?

- A. Condensation
- B. Precipitation

C. Transpiration

D. Runoff

65. A designer reproduces a product design without authorization from the original creator. Which principle is violated?
- A. Environmental compliance
 - B. Breach of intellectual property rights**
 - C. Safety regulation
 - D. Contract law
66. In object-oriented programming, why are objects considered fundamental building blocks of a system?
- A. They simplify compilation
 - B. They encapsulate data with related behavior**
 - C. They eliminate memory usage
 - D. They prevent debugging
67. In a supercapacitor, efficient energy storage heavily relies on:
- A. High mechanical strength
 - B. Rapid transport of ions during charge and discharge**
 - C. Chemical combustion
 - D. Thermal insulation
68. Which feature distinguishes object-oriented programming from procedural programming?
- A. Sequential execution
 - B. Use of variables
 - C. Grouping data with related methods**
 - D. Use of loops
69. A force acts on an object for a short time interval causing its velocity to change. Which physical quantity describes this effect?
- A. Power
 - B. Work
 - C. Momentum
 - D. Impulse**
70. In a stationary fluid, why does pressure increase with depth?
- A. Temperature rises
 - B. Fluid density decreases
 - C. Gravitational force acts on the fluid above**
 - D. Viscosity increases
71. Which organisms are essential for energy flow in an ecosystem because they convert solar energy into chemical energy?
- A. Consumers
 - B. Decomposers
 - C. Producers**
 - D. Parasites
72. A straight conductor moves perpendicular to a uniform magnetic field. Which change will increase the induced EMF?
- A. Decreasing conductor length
 - B. Reducing magnetic field strength

C. Increasing the speed of motion

D. Aligning motion parallel to the field

73. If the resistance of a circuit remains constant and the voltage is doubled, what happens to the current?
- A. It decreases
 - B. It remains constant
 - C. It increases proportionally**
 - D. It becomes zero
74. An engineer develops a novel electronic circuit with a unique functional design. Which protection directly secures this invention?
- A. Copyright
 - B. Trademark
 - C. Patent**
 - D. Trade secret
75. What is the SI unit of pressure?
- A. Newton
 - B. Joule
 - C. Pascal**
 - D. Watt
76. When light enters a transparent medium from vacuum, which factor directly determines the material's refractive index?
- A. The ratio of optical path length to geometric path length inside the material
 - B. The wavelength-dependent absorption coefficient of the medium
 - C. Speed reduction of light within the medium**
 - D. The mass density of the medium under standard conditions
77. What directly influences electrical conductivity in solid materials?
- A. Surface roughness
 - B. Availability of charge carriers**
 - C. Material color
 - D. External pressure
78. Which characteristic distinguishes polymers commonly used in engineering applications?
- A. Crystalline metallic bonding
 - B. Repeating long-chain molecular structure**
 - C. High thermal conductivity
 - D. Ionic lattice structure
79. In engineering economics, the principle of equivalence states that:
- A. All projects have equal cost
 - B. Money has no time value
 - C. Monetary values at different times can be compared through proper adjustment**
 - D. Interest rates are constant
80. Which crystal defect involves a missing atom at a lattice site?
- A. Interstitial defect
 - B. Dislocation
 - C. Substitutional defect
 - D. Vacancy defect**

81. Which GUI framework supports event-driven programming and customizable components without relying on the underlying platform's native widgets?
- A. java.awt
 - B. javafx.scene
 - C. javax.swing**
 - D. org.eclipse.swt
82. A manufacturing firm reports record profits but faces community protests due to environmental concerns. Under the Triple Bottom Line framework, which dimension is primarily being challenged?
- A. Economic performance
 - B. Environmental responsibility**
 - C. Social equity
 - D. Financial liquidity
83. When indicating the exact distance between two parallel edges in a technical drawing, which CAD tool should be used?
- A. Angular dimension
 - B. Radial dimension
 - C. Linear dimension**
 - D. Leader annotation
84. Motion analysis that describes how an object's position changes over time without considering mass refers to:
- A. Dynamics
 - B. Statics
 - C. Kinematics**
 - D. Kinetics
85. Two materials have identical shape and temperature, but one conducts electricity better than the other. Which property primarily accounts for this difference?
- A. Density
 - B. Thermal conductivity
 - C. Electron mobility**
 - D. Surface roughness
86. A gas is slowly compressed while heat escapes so that its temperature remains constant. This process is best described as:
- A. Adiabatic process
 - B. Isobaric process
 - C. Isochoric process
 - D. Isothermal process**
87. Two AC signals of different frequencies are applied to the same inductor. At higher frequency, what occurs?
- A. Lower inductive reactance
 - B. Higher inductive reactance**
 - C. Zero impedance
 - D. Constant reactance
88. A programmer assigns an integer to a variable and later assigns a string to the same variable without compilation error. Which language feature allows this?
- A. Compile-time type enforcement
 - B. Static typing

C. Runtime type checking (dynamic typing)

D. Strong typing

89. A company recalls a product after discovering a safety flaw despite significant financial loss. Which principle is demonstrated?
- A. Profit maximization
 - B. Ethical responsibility**
 - C. Market dominance
 - D. Competitive positioning
90. Before investing in mass production, a startup analyzes customer problems, purchasing behavior, and unmet needs. What stage of business development is this?
- A. Product scaling
 - B. Market validation**
 - C. Expansion strategy
 - D. Financial restructuring
91. After large-scale vegetation removal, a city experiences increased flooding and higher food prices. What is the MOST direct ecological explanation?
- A. Increased biodiversity
 - B. Reduced primary productivity affecting ecosystem services**
 - C. Improved soil aeration
 - D. Enhanced carbon sequestration
92. An ECE is offered consultancy work that conflicts with a current client's interests. What is the MOST appropriate action according to professional ethics?
- A. Accept both projects secretly
 - B. Ignore the conflict
 - C. Disclose the conflict and avoid unethical engagement**
 - D. Prioritize higher payment
93. Corporate Social Responsibility (CSR) initiatives slightly reduce short-term profit but improve company reputation. What is the MOST reasonable justification?
- A. Immediate shareholder gain
 - B. Enhancement of long-term corporate sustainability**
 - C. Avoidance of taxation
 - D. Marketing gimmick
94. A plastic component softens when heated and regains shape upon cooling without chemical change. Which property does this behavior demonstrate?
- A. Thermosetting behavior
 - B. Brittleness
 - C. Thermoplastic reprocessability**
 - D. Cross-linking stability
95. A Java interface includes methods introduced in later language versions (e.g., default methods). What is the main purpose of this feature?
- A. Improve memory efficiency
 - B. Increase execution speed
 - C. Allow interfaces to maintain backward compatibility**
 - D. Eliminate inheritance

96. A company redesigns how products are delivered to customers but keeps price and promotion unchanged. Which marketing element outside the traditional 4Ps is being adjusted?
- A. People
 - B. Process**
 - C. Positioning
 - D. Packaging
97. A device designer requires lightweight power storage with frequent recharge cycles. Which characteristic is MOST important?
- A. High internal resistance
 - B. Low manufacturing cost
 - C. High energy density per unit mass**
 - D. Large physical size
98. When analyzing multiple project options with uncertain outcomes, what is the primary advantage of using a decision tree?
- A. Eliminates uncertainty
 - B. Guarantees profit
 - C. Structures complex decisions into sequential choices**
 - D. Reduces computational cost
99. An asset loses a greater portion of its value during the early years of use compared to later years. This is characteristic of:
- A. Straight-line depreciation
 - B. Declining balance method
 - C. Accelerated depreciation in initial periods**
 - D. Sinking fund method
100. Which crystal imperfection most directly alters charge carrier movement in semiconductor materials?
- A. Vacancy defect
 - B. Interstitial defect
 - C. Lattice dislocation**
 - D. Substitutional impurity

ANSWER KEY:

1. B. Insufficient food supply and habitat support
2. B. The balloon expands outward
3. C. Fixed operating cost
4. B. Transverse wave
5. C. Analyze cost variance and adjust project plans
6. B. Doping and diffusion process
7. C. The faster conductor produces more induced current
8. C. Altered mechanical and electrical properties
9. C. Professional accountability and responsibility
10. B. Managing cash flow and operational risks
11. B. Reducing variation in service delivery duration
12. C. CreateWindow()
13. C. Section 21 – Integration of Electronics in Agriculture and Fisheries
14. D. Polymorphism
15. C. Greater predictability in operations
16. B. Written acknowledgement of debt
17. C. Improved alignment between product and user needs
18. C. Internal wiring integrity and possible insulation faults
19. C. Efficient but ineffective

20. C. To allow selective visibility during drawing work
21. C. Physical characteristics of the medium
22. C. Ampere
23. C. End-of-life handling and recycling impact
24. C. Changes in environmental compliance laws
25. B. Catch
26. C. Elasticity
27. B. Organizing
28. B. Adherence to structural and seismic design standards
29. B. Maximizing useful output from available energy
30. C. Lead-acid battery
31. B. Absorption of atmospheric carbon dioxide by seawater
32. C. Determining target market segments
33. C. Douglas McGregor
34. C. Voltage increases proportionally
35. B. Resistance to high temperature
36. C. 1.20 A
37. C. Enhanced performance at reduced device size
38. C. National unemployment trends
39. C. Compression waves moving through air
40. C. To ensure public safety and professional accountability
41. B. Free electrons in the conduction band
42. C. Electron or positron
43. B. Evidence of scalable market demand
44. D. Covalent bond
45. B. Converted into heat across resistive elements
46. C. Charge induction within the paper
47. B. Extremely high temperature and pressure
48. C. Variation of speed with wavelength inside the medium
49. B. Marine food web stability
50. B. Worker behavior is shaped by social interaction
51. C. Regulations for equipment used in hazardous environments
52. D. Angular velocity
53. C. Net reactance becomes zero
54. B. Licensed ECE with valid registration
55. C. Loss of electrons by species
56. C. Persistent poverty affecting education and health
57. C. Future worth of an ordinary annuity
58. D. Copyright
59. C. Functional programming
60. C. Problem domain modeling
61. B. Monitoring compliance with license renewal requirements
62. B. Absorption and re-emission of infrared radiation
63. C. 3.33
64. C. Transpiration from vegetation
65. B. Breach of intellectual property rights
66. B. They encapsulate data with related behavior
67. B. Rapid transport of ions during charge and discharge
68. C. Grouping data with related methods
69. D. Impulse
70. C. Gravitational force acts on the fluid above
71. C. Producers
72. C. Increasing the speed of motion
73. C. It increases proportionally
74. C. Patent
75. C. Pascal
76. C. Speed reduction of light within the medium
77. B. Availability of charge carriers
78. B. Repeating long-chain molecular structure
79. C. Monetary values at different times can be compared through proper adjustment

- 80. D. Vacancy defect
- 81. C. javax.swing
- 82. B. Environmental responsibility
- 83. C. Linear dimension
- 84. C. Kinematics
- 85. C. Electron mobility
- 86. D. Isothermal process
- 87. B. Higher inductive reactance
- 88. C. Runtime type checking (dynamic typing)
- 89. B. Ethical responsibility
- 90. B. Market validation
- 91. B. Reduced primary productivity affecting ecosystem services
- 92. C. Disclose the conflict and avoid unethical engagement
- 93. B. Enhancement of long-term corporate sustainability
- 94. C. Thermoplastic reprocessability
- 95. C. Allow interfaces to maintain backward compatibility
- 96. B. Process
- 97. C. High energy density per unit mass
- 98. C. Structures complex decisions into sequential choices
- 99. C. Accelerated depreciation in initial periods
- 100. C. Lattice dislocation
